

I'm Gyula Pálffy, 19 years old. I'm going to Eötvös Loránd University; it's the second semester for me. I like Chemistry, that's why I participated in the last three IChO's as a student and now I study Chemistry in the university. I would like to be a researcher (in Chemistry or a biochemistry because I'm fond of Biology too) in the future. So I'm happy to be a guide in this IChO in Hungary. In my free time I play the piano (I used to study it for 11 years), listen to praising music and read the Holy Bible, so I'm very interested in the history of Israel and the contemporary nation too. I have learned Latin language in high school beyond English; I'm also interested in ancient times. Although I don't do sports a lot, I like playing table tennis very much.
