

My name is Peter Nagy. I'm a 20-year-old, second-year student in the Faculty of Science at Eötvös Loránd University and learning Chemistry of course. Fortunately I live in a town in the middle of the Great Hungarian Plain close to the nature. My main scientific interests are on the border of chemistry and physics, and in addition computational chemistry.

Two years ago I participated in IChO as a student and one of my reasons why I would like to guide you is that I want to feel the unique atmosphere of this event again, meet a lot of new friends with the same interest as mine and experience from an other point of view how this great mixture of nations works. My best friend – who had a similar journey to Singapore – told me riveting stories about your country, so this choice makes me very happy, and I'm excited about our meeting.

Something closer about me: you will easily recognise me in a heavy crowd, because I have grown pretty tall 😊 (and my surname also means right that: big or tall in Hungarian). I like doing sports – especially in team – jogging, playing cards and parlour games. I follow recipes in the laboratory and in the kitchen too.
