

Hi,

My name is Mate Olah. I'm eighteen years old and currently attend the secondary grammar school in Vac. My fields of interest in learning are Biochemistry and Foreign Languages. I have acquired comprehensive skills in English and in German, besides I speak Russian and French and a pinch of Italian and Spanish. I'm fond of foreign countries and their cultures, I really like traveling.

I'm keen on such experiences in which new things can be found out about people and science. I'm an optimist who tries to find the sunnier side of life and things in general, too.

Well, I'm told to be communicative, vigorous, smart and ambitious. I enjoy speaking to people with whom I work and study. All of them are so interesting with individual features and attitude!

I'm delighted to have this splendid opportunity to spend 10 days guiding the forthcoming scientist generation in Budapest. Almost a fortnight with such people who are obviously not only brilliant at Chemistry, but who are surely interested in personal interactions and in Hungary altogether, as well...

If you have any questions, all of them are kindly awaited at olah_mate@vipmail.hu or by msn at [olah_mate@windowslive.com](msn://olah_mate@windowslive.com)!

I look forward to the occasion. :)

Best wishes,

Máté
